**DRAKONTAS TO EXHIBIT WEB-BASED
FORENSICS COMMUNICATIONS PLATFORM
AT THE AAFS 63RD ANNUAL SCIENTIFIC MEETING**

CAMDEN, NJ (February 7, 2011): Drakontas, a collaboration software provider serving the criminal justice, law enforcement, defense and homeland security communities, announced today that it will be exhibiting its *LABFx* forensics communications and workflow management platform at booth 902 at the American Academy of Forensic Sciences' (AAFS) 2011 Annual Meeting, being held February 21-26 at the Hyatt Regency Hotel, Chicago.

LABFx is a web-based forensics information exchange platform that facilitates real-time collaboration and enhances workflow across the criminal justice system and provides 24/7 access to up-to-date case information. *LABFx* enables users to submit and manage examination requests and related case information, allowing lab personnel to assign and manage tasks, assess and monitor workflows, and deliver casework reports more efficiently and timely. *LABFx* helps laboratories reduce operational inefficiencies, turnaround times and case backlogs.

“LABFx is a relatively new platform, yet our customers are already starting to see its impact on their operations and case backlogs in the short time they have been using it. The collaborative experience provided by LABFx has enabled forensics laboratories to increase efficiencies within their businesses and across the entire criminal justice system,” said James Sim, President & COO of Drakontas.

About Drakontas LLC

Drakontas, headquartered in Camden, New Jersey, develops collaboration tools, manages research and development programs, provides training, and builds custom software and communications solutions for government and business customers. The company was founded in partnership with Drexel University in 2004 to transition technologies developed at the Applied Communications and Information Networking (ACIN) Center for the Department of Defense to commercial, civilian and homeland security uses.
